Summary

Full Stack Engineer experienced in building client-facing web applications with React.js, Next.js, Node.js, NestJS, REST APIs, SQL/NoSQL databases, and AWS. Built AI-enabled workflows, multi-tenant platforms, role-based dashboards, and CMS-driven websites for US and Indian clients, with hands-on AWS deployment experience and production issue resolution across client projects.

Work Experience

Wesoftek Solutions Pvt. Ltd. Dec 2025 – May 2026
Software Engineer (Full Stack)

- Developed the end-to-end React.js frontend for an AI-assisted loan-repayment platform, enabling collection teams to track customer EMI/loan status, call outcomes, payment commitments, due-date alerts, reminder responses, and cases requiring manual follow-up.
- Built role-based employee and manager dashboards, customer follow-up and escalation workflows, and integrated NestJS REST APIs with real-time, token-streamed Gemini API responses to power an agentic AI voice-calling system for repayment outreach.
- Independently built a multi-tenant URL-shortening and campaign-management platform from scratch, enabling organic and business users to create short URLs and QR codes, organize campaigns, and manage URL assets through dedicated user-facing and organization portals.
- Developed the React.js frontend and NestJS backend for the platform above, implementing email/OTP authentication, Swagger-documented REST APIs, granular role-based access control, user invitations, and subscription-based feature limits across super-admin, organization-admin, business, and organic-user workflows.
- Developed Next.js frontend features and Payload CMS integrations for three localized US-client websites—German, French, and global English—on a single shared Payload CMS backend enabling centralized content management across all three.
- Led a Next.js and Strapi CMS multi-location website for an Indian client, mentoring a junior developer, implementing location-based content switching, and preparing CMS documentation to help clients update live website content independently.

Projects

AI Terminal Assistant (LLM CLI) – Node.js, Groq SDK, MongoDB, Commander.js GitHub

- Built a terminal-based AI assistant using Groq Llama 3.3 70B, with streamed output, multi-turn conversation context, and MongoDB-backed persistent memory across sessions.

Real-Time AI Chat Platform – Next.js, Express.js, MongoDB, SSE, Tailwind CSS GitHub

- Developed a real-time AI chat platform with token streaming via SSE, voice input, and MongoDB-persisted chat history using a Next.js frontend and Express.js backend.

Task Manager API – FastAPI, PostgreSQL, SQLAlchemy, JWT GitHub

- Built a RESTful task management API using FastAPI and PostgreSQL, with JWT-based authentication, a modular service-layer architecture, and auto-generated Swagger API documentation.

Education

CMR University Sep 2021 – May 2025
Bachelor of Technology in Computer Science and Engineering, CGPA: 7.81

Skills

Programming: JavaScript, TypeScript, Python, Java, SQL, Data Structures, Algorithms

Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS

Backend: Node.js, NestJS, Express.js, FastAPI, RESTful APIs, Swagger, Spring Boot

Databases: MySQL, PostgreSQL, MongoDB, RDBMS, NoSQL

Cloud: AWS, Azure DevOps

CMS: Strapi CMS, Payload CMS

AI / GenAI: Agentic AI, Prompt Engineering, Google Gemini, RAG

Systems & Tools: Linux, Docker, Git, GitLab, VS Code, Kubernetes, Jira, Azure DevOps

Certifications

- Introduction to Generative AI with GPT – LinkedIn Learning
- REST API Intermediate – HackerRank
